The students will be able to systematically discuss the problems of the discipline.
FILOA0215	Philosophy of History and Religion	4	seminar	English	test or essay or oral exam	Dr. Tibor GÖRFÖL, gorfol.tibor@pte.hu	An argument for dealing with philosophy of history and religion in a parallel way can be drawn from the fact that a systematic reflection on history was developed in the European traditions in a religious context, and philosophy of history had originally a religious motive in Europe. The course shows the historical relation of historical and religious thought, and also highlights the contemporary scepticism related to this connection. The course provides an introduction to the theoretical questions of a reflection on history, to the thought of the major exponents of the field (from Augustine to Karl Löwith), and to the contemporary concepts of an interpretation of history outside the religious framework (including the notions of the impossibility of a philosophy of history). Students should be able to identify the religious notions inherent in the interpretations of history, and to classify contemporary paths in the philosophy of history.[]

FILOA0216	Philosophy of Science and Epistemology	4	seminar	English	test or essay or oral exam	Dr. László KOCSIS, kocsis.laszlo@pte.hu	Epistemology and philosophy of science are closely related philosophical disciplines. Generally speaking, in epistemology, we try to provide a theory of knowledge, and, in philosophy of science, we try to elucidate a theory of scientific knowledge. The course is divided into two main parts. In the first part we will be concerned with the best attempts to define the concept of knowledge. However, it seems that for a clear definition of the concept of knowledge firstly we have to clarify the concept of truth and justification, but the questions „What is truth?” and „What is justification?” cannot be answered easily. In the second part of the course, we will discuss the most fundamental questions of philosophy of science, like „What makes a theory scientific?”; „What is the special nature of scientific knowledge and how can we get it?”; „What is the nature of scientific explanations?”; „What are the laws of nature?”; „How does science progress?”; and „What is the relationship between science and philosophy?”. The main aim of this course is to offer a conceptual toolbox to study the most fundamental problems in epistemology and philosophy of science, to discuss the arguments for and against some epistemological theories, and to discern the philosophical implications of scientific theories.□
KLAF3004	Altgriechisch für Anfänger I	4	seminar	German	test or essay or oral exam	Dr. Katalin BÉLYÁ CZ, belyacz.katalin@pte.hu	Altgriechisch für Anfänger. Deklination, Konjugation von paideuo, Beispielsätze.
KLAF0101	Introduction to the Ancient Greek and Roman World	3	lecture	English	test or essay or oral exam	Dr. András KÁRPÁ TI, karpati.andras@pte.hu	The course examines the cultures, languages and societies of the classical world and their survival, with changing meanings to the present day. Through a selection of material remains and textual sources from antiquity, we will trace how this heritage was used to create European identity. We will see examples from all the major disciplines dealing with classical heritage: the study of classical languages, classical archaeology, art history and comparative literature will be presented. Europe as a unique culture, which, despite its internal differences, appears as a unity to outsiders, is indebted to Greek philosophy - for founding reason, humanism, democracy, art, science and technology - and to Roman thought - for its prominence in linguistic precision, legal order, written documentation, state administration. Ancient Greece and Rome are the roots of our modern society, the course explores what the fine arts and architecture, epic poetry, Greek drama, philosophy, philology and historiography meant then, and how they have been transmitted in changing forms and with changing meanings over time.
MAGYA0101	Bevezetés a filozófiába/Introduction to Philosophy	2	lecture	English	test or essay or oral exam	Dr. Róbert SOMOS, somos.robert@pte.hu	The course presents a historical and thematic introduction to philosophy. It covers the field of western philosophy from the pre-socratic philosophy to present day. It offers a close reading of selected texts and a lecture of the context the selected texts fit into. KOMT1034	Ethical Challenges in Digital Journalism	4	seminar	English	active participation in the discussions, referate, final essay	Dr. Annamária TORBÓ, torbo.annamaria@pte.hu	The technological developments since the end of the 20th century have not only impacted on journalistic practices, but the global, digital age effects journalism ethics. The entry of digital technology acts as one of the most significant factors changing the ethical practice of journalism today, as one example they name the journalists' dilemma of often having to decide between speed or verification and accuracy. The increase of journalistic investigations and publications online poses many other new challenges – besides the rather classical questions such as impartiality, conflict of interest, deception and betrayal – at the forefront is an ever-increasing amount of fake news that urges extensive fact checking, and dealing with hate speech in comments sections. Other ethical issues include questions arising from linking content from other sources, including content from citizen journalism and whistle blowers, handling large amounts of data as well as the products of digital visualization (photo, video, graphics), plagiarism, and problems of privacy in the digital age.
